01 · Start here: the final, and how this episode works

The words of this track, as it says them. Bold brown is the examiner.

Health Science 2. The final exam. Every case question.

This is the final exam episode of the SAQ podcast for Health Science 2. In her own words, the exam will be based on the starred case studies in your Case Study Booklet A. Her exam announcement says the exam cases are the ones marked in yellow and starred. The blue test cases, like lactation and Jack's hearing loss, are not in the exam. And in a later post she said the exam's multiple choice, matching and drop-down questions are those same case questions, converted. So if you can answer every case question in writing, you've covered the closed questions too.

Ten cases, in booklet order. Case 2, lymph node removal. Case 3, asthma. Case 4, panic attacks. Case 6, diabetes. Case 8, joints and arthritis. Case 9, neurotransmitters and Parkinson's. Case 10, stroke. Case 13, fertility. Case 14, red-green colour blindness. And case 15, genetic diseases.

Where the answers come from. Almost every answer here is hers: her case study model answer decks, her recorded case sessions, her fertility quiz, her formative case test, and her posts. Where she hasn't posted an answer yet, you'll hear that said, and the answer is built from her module content. And because the yellow shading covers the whole case, the unstarred questions inside those cases are in here too. Her helpline says an unstarred question can still be asked.

The exam itself. Wednesday the fourth of November, on campus, in the computer labs. It moved from the fifth: she said so in her lecture on the seventh of October. The time is still to be confirmed, so check Canvas, and be at your venue forty-five minutes to an hour early, with your student ID. It's two hours and ten minutes. Thirty-two questions, ninety marks, and about thirty-seven per cent of the marks are written. Half marks only exist in the written answers. The multiple choice and matching questions are all or nothing.

Two things she has promised. The diagrams in the case booklet will be in the exam: the joint, the synapse, the cerebrum, the cycle graph. The labels might change, numbers instead of letters, but the pictures are the ones you've seen. And she marks written answers at about half a mark per fact. So a four-mark question wants about eight short facts, one per line.

How every track works. The examiner's voice reads the case, then each question with its marks. Then you hear her answer, line by line, with any tip she gave in her sessions. Each track ends with the whole thing once more, in one breath, and the last track, Rapid-fire, strings all of those together. Loop a track until the answer comes out of you before it comes out of me. Let's start with case 2.
